

Quality Scotland's Online Learning Platform

The web-based platform has been developed by specialists in the field of online learning design.

Development was based upon 2 core principles:

- Engaging participants in an **innovative** learning experience, through the use of cutting-edge web2.0 technologies.
- Encouraging **interactivity** to provide learners with the confidence and expertise to apply theory into practice.

Features

- Support for web2.0 technologies, such as wikis, blogs, forums and collaborative exercises.
- Integration with web-conferencing software.
- Support for embedded video content, including tutor-presentations.
- Support for interactive Flash based applications, including quizzes, animations, and scoring exercises.
- Online assignments and assessments, as well as automatic generation of course certificates.
- The facility for various forms of tutor-support.
- Student tracking and monitoring.
- Fully customisable interface and design.
- A sophisticated permissions system, allowing for different levels of access to be applied according to a user's role.

Standards

- Compliance with the SCORM international standards for online learning resources.
- Compliance with W3C standards for web-accessibility.
- Support for all major web-browsers and computer platforms (Mac and PC).
